San Jose, California – In a decisive move to offer customers simply the broadest range of inter-brand proximity compatibility, **Keri Systems, Inc.** confirms that the just released **MCR-403 *InStar*[™] proximity reader can read Motorola's 26-Bit Wiegand formatted proximity access control cards**, including the ASC-121T card, ISO-30 card and ASK-116 tag. For the first time existing users of Motorola's ASP line of proximity access credentials can now enjoy the benefits of a truly interchangeable second source, including competitive pricing, fast delivery, responsive customer service, lifetime warranties and state-of-the-art designs.

Keri Systems is a recognized leader in the development and supply of access controls and proximity readers, cards and tags to the electronic security industry. Motorola compatibility joins HID compatibility, which Keri successfully launched as an optional feature with their ***Pyramid Series Proximity*[™]** line of OEM proximity readers, cards and tags.
