

Eclipse.NET™

Access Control Software.....designed for today's IT environments

- **Software Application to manage Keri's TCP/IP- based NXT hardware platform as well as hardware from Mercury Security and Assa Apero.**
- **Native Microsoft .NET Application**
- **Alarm monitoring, prioritization and acknowledgement**
- **Built-in digital video viewing and recording, with enhanced optional video features (Reflections)**
- **Integrated Badging (optional)**
- **Client/Server Architecture provides Multiple Concurrent Operators**
- **Microsoft SQL™ Database with Stored Procedure operation for speed and reliability**
- **Built-in flexible reports, plus "Reports on the Fly"**

Eclipse.NET™ is Keri's access control software application designed for medium to large installations with more sophisticated requirements. It was designed natively in Microsoft's .NET platform and utilizes their SQL database engine, with all instructions and communication with the database done through Stored Procedures, making response lightning quick.

As an extension of its sister product, *Doors.Net*, the software is powerful enough to meet most applications. In addition to the sophisticated access control functionality it provides, *Doors .NET* allows multiple Operators to manage and monitor an unlimited number of sites concurrently, and provides many advanced features, including integrated video, alarm reporting and prioritization, photo badging and many others.

Three versions of Eclipse.NET are available to meet various capacity and feature requirements, Standard, Professional and Enterprise, all of which are easily upgradeable. Optional advanced features are also available that allow users to further customize the software for their unique application.
