

Keri's [Reflections Event Video Recorder](#) (EVR) works as an integral part of our Doors.NET and Eclipse.NET access control software to provide the kind of access and video integration with a unique set of features that customers can really use. All this in an IT-friendly architecture that works seamlessly with Keri's TCP/IP-based NXT Hardware platform.

- A single user interface that allows the right-click control of doors and auxiliary outputs directly from the video screens, speeding response time, eliminating the necessity to purchase multiple clients and associated hardware, and the time to train on multiple platforms
- The ability to retrieve archived video directly from the access control application, even if the video connection is lost, the time stamp on the Video Server is wrong, or the Video Server has overwritten the video clip
- No reliance on inaccurate time stamps to link access and video events
- Automatically embed a cardholder's archived picture directly in the video event, simplifying historical audit processes
- Many more unique customer features, which can be viewed [here](#).

Reflections is compatible with a growing number of IP camera and NVR product lines:

Aimetis  
Milestone  
Panasonic  
Axis IP

OnSSI  
Pelco 8100 series (32 bit OS)  
Vivotek IP Cameras

Stop by the booth to check it out. While you are there, you can also view a modern IP-based access control platform, with optional embedded firmware from Mercury Security Corporation and IR/Schlage AD Series and ASSA Aperio wireless lock support.

For those who want the benefits of our TCP/IP connected NXT hardware but prefer something simpler that also avoids potential conflicts with customer IT departments, ask about our [AutoUSB](#) Simplified Networking Solution.
