KERI SYSTEMS INTRODUCES EIGHT-DOOR CONCENTRATOR

Provides control for eight doors in one, space saving cabinet.

San Jose, CA – September 20, 2005 – The KDC-8 Eight Door Concentrator allows customers to mount up to 4 PXL-500 *Tiger Controllers* and 4 SB-593 *Expansion Boards* for access control in a single cabinet, saving valuable space in a utility closet, IT Rack, or wherever the access controllers are located. Individual controllers are connected to a backplane, which then contains all external connections to the system, such as power RS-485, card reader, request to exit, door sense switch, and auxiliary I/O.

The 8 Door Concentrator was designed as a locking metal, IT Rack-Mountable enclosure with sufficient cable conduit knockouts to provide maximum installation flexibility. When used with Keri's KPS-11 10 Amp, 10 output Power Supply, the KDC-8 can supply not only controller/reader power, but also isolated, combined lock power and lock control. Individual toggle switches for each controller allows technicians to easily power the controllers on and off during installation.

ABOUT KERI SYSTEMS:

Keri Systems is a leading provider of integrated card access control, telephone entry, and video badging systems. Located in the heart of California's famed Silicon Valley at 1530 Old Oakland Road, Suite 100, San Jose, CA, 95112, USA, the company continues to enhance its leadership in controller and proximity technology by offering a suite of products and services for customers requiring more than just basic access control hardware and software.
