**KERI SYSTEMS INTRODUCES WIRELESS NETWORKING TRANSCEIVERS**

*Allows Customers to Finance a System Over a Five-Year Period*

San Jose, CA – July 6, 2005 – Because cabling between controllers of an access control system can often be difficult or prohibitively expensive, especially across parking lots or in architecturally sensitive older buildings, Keri has introduced their Wireless Networking Transceivers.

Keri's Wireless Transceivers provide a solution by transmitting and receiving data between access controllers located up to 300 feet apart, or even more if optional antennas are used.

These products circumvent difficult or impossible-to-wire situations.

**ABOUT KERI SYSTEMS:**

Keri Systems is a leading provider of integrated card access control, telephone entry, and video badging systems. Located in the heart of California's famed Silicon Valley at 1530 Old Oakland Road, Suite 100, San Jose, CA, 95112, USA, the company continues to enhance its leadership in controller and proximity technology by offering a suite of products and services for customers requiring more than just basic access control hardware and software.
