KERI SYSTEMS LAUNCHES SYSTEM DESIGN TOOL

Configurator Allows Customers to Design Their Own Security System

San Jose, CA – July 25, 2005 – Keri Systems has added a configuration tool to its website that allows customers to easily design a security system. The online Configurator prompts the user through a series of basic questions about the system requirements, then when finished generates a complete Keri parts list for the products required to complete the project. A link to the Configurator can be found on Keri's home page at www.kerisys.com, or directly at www.kerisys.com/configurator/index.asp.

The initial question asks customers what components of a security system are required (card access, video badging, telephone entry, elevator control, etc.), and then limits the subsequent questions to only those that are relevant to the desired system components. A progress bar in the upper right shows the users how far along in the process they are. Each question has a "Help" button if the user needs more detail, and a notepad for entering useful comments. Users can proceed anonymously, or log into the Configurator with a new account or using an existing account. Existing accounts can recall previously saved Configurator projects for modification or request a quote from Keri (Keri resellers only, end users can be referred to resellers in their area).

ABOUT KERI SYSTEMS:
Keri Systems is a leading provider of integrated card access control, telephone entry, and video badging systems. Located in the heart of California's famed Silicon Valley at 1530 Old Oakland Road, Suite 100, San Jose, CA, 95112, USA, the company continues to enhance its leadership in controller and proximity technology by offering a suite of products and services for customers requiring more than just basic access control hardware and software.
