KERI SYSTEMS RELEASES ENTRAGUARD TELEPHONE ENTRY UNIT

Provides integrated access control and telephone entry.

San Jose, CA – October 21, 2005 – The **Entraguard Platinum** is the newest in Keri's Entraguard telephone entry product line, with the largest capacity and biggest display Keri offers. The Platinum has a 5,000 tenant capacity, more than enough to handle nearly any large project, and also has two large font sizes: 3/8 inch for ten name display and 1/2 inch for seven name display, adjustable on demand by the visitor. The unit is designed for durability and weather resistance with a tough 14-gauge stainless steel enclosure. Recess mount kit, hood, camera, handset, and No-Phone-Line are available as options. Additionally, the Platinum can also be fitted with PXL-500 **Tiger Controller** and SB-593 **Satellite Expansion Board** to provide one or two door card access capability within the unit itself. Each unit can be programmed with three rotating messages for display

Like its sister products, Entraguard **Gold** and Entraguard **Titanium**, the Platinum provides the best telephone entry/access control marriage available by letting the Entraguard function as a node on a PXL access controller network and putting both functions under the acclaimed **Doors** software umbrella. Up to six units can share a single phone line, and it supports up to a six digit directory code and 15 digit phone number. The Entraguard Platinum also has two extra relay outputs that can be used in a variety of ways, including turning on a lobby light, unlocking an interior door, etc., by tone commands from the tenant's location or based on an access granted decision. An on-board modem is included for remote programming.

ABOUT KERI SYSTEMS:

Keri Systems is a leading provider of integrated card access control, telephone entry, and video badging systems. Located in the heart of California's famed Silicon Valley at 1530 Old Oakland Road, Suite 100, San Jose, CA, 95112, USA, the company continues to enhance its leadership in controller and proximity technology by offering a suite of products and services for customers requiring more than just basic access control hardware and software.
