KERI SYSTEMS RELEASES ENTRAGUARD TITANIUM TELEPHONE ENTRY SYSTEM

Small, rugged, telephone entry unit integrates with Keri's access control systems.

San Jose, CA – June 15, 2005 – The Entraguard **Titanium** represents a breakthrough in telephone entry by providing 750 tenant capacity with a four-line LCD display in a small, attractive package, all at an extremely low price. The small footprint allows it to be mounted almost anywhere, and its rugged stainless steel enclosure with built-in hood is designed to withstand the toughest environments. Each Titanium unit can be programmed with three rotating messages for display.

Like its sister products, Entraguard **Gold** and Entraguard **Platinum**, the Titanium provides the best telephone entry/access control marriage available by letting the Entraguard function as a node on a PXL access controller network and putting both functions under the acclaimed **Doors** software umbrella. Up to six units can share a single phone line, and supports up to a six digit directory code and 15 digit phone number. The Entraguard Titanium also has two extra relay outputs that can be used in a variety of ways, including turning on a lobby light, unlocking an interior door, etc., by tone commands from the tenant's location or based on an access granted decision. An on-board modem is included for remote programming. Options include a video camera, postal lock, and 'No Phone Line' system.

ABOUT KERI SYSTEMS:

Keri Systems is a leading provider of integrated card access control, telephone entry, and video badging systems. Located in the heart of California's famed Silicon Valley at 1530 Old Oakland Road, Suite 100, San Jose, CA, 95112, USA, the company continues to enhance its leadership in controller and proximity technology by offering a suite of products and services for customers requiring more than just basic access control hardware and software.
