Keri Announces Vivotek IP Camera Integration

Keri Systems has added Vivotek IP Camera compatibility to their Reflections Event Video Recorder Client that works as an integral part of Keri's acclaimed Doors.NET and Eclipse.NET software packages. Vivotek cameras can be connected directly via the included Reflections Express offering as well as through a separate more fully featured Reflections Client with even greater capabilities. For the most sophisticated solution, Vivotek cameras can also be integrated when connected to Keri Partner 3rd party NVRs.

When paired with Vivotek IP Cameras, Reflections provides a number of advanced features in access control and video integration for IP cameras and NVRs, such as the ability to manage multiple video vendors' products from a single user interface, archiving backup copies of historical video clips even after the NVR has overwritten them, and not requiring reliance on potential inaccurate time stamps. Reflections also gives customers a number of unique command and control Operator features that add additional flexibility and power to their system.

"We are excited to be working with Keri Systems as one of their IP video partners," said Harry Hu, Director of Sales at VIVOTEK USA. "Keri's diverse lineup of IP access control solutions, coupled with the fact that they have direct integration with our full line of HD and megapixel cameras, allows for a complete package that is perfect for our dealer base." According to Dennis Geiszler, Vice President, Marketing for Keri Systems, "In addition to Vivotek's technology that integrates nicely with our products, we share many common distribution channels and sales & marketing philosophies that will allow customers a one-stop shopping approach when looking for an integrated solution".

About VIVOTEK

VIVOTEK Inc., established in 2000 and publicly listed on the Taiwan Stock Exchange (TAIEX: 3454), has quickly taken its place as a technology leader and total solution provider in the IP video surveillance industry. VIVOTEK is known for excellence, delivering total IP video surveillance solutions that embody the complete integration of video codecs, optoelectronics and networking technologies.
